## Aprašymas

### XREAL EYE camera for AR glasses

The XREAL EYE camera is designed to naturally and precisely anchor the image in space. Thanks to 6 DoF technology, the virtual displays stay exactly where you place them - whether you move, turn your head or walk. This allows for a much more realistic and stable AR glasses experience.

### Ready to go without additional hardware

The built-in X1 chip allows instant interoperability with most devices equipped with DisplayPort output. There's no need to install any apps, drivers or use additional relays - just connect the camera to compatible AR glasses from the XREAL One series and you're ready to go right away.

### Instant response to motion

The X1 chip-based image processing technology provides incredibly low latency - just 3 ms between movement and the response of the displayed image. As a result, virtual content does not lag in relation to head movements. This is crucial for a comfortable augmented reality experience, especially for longer sessions.

### Capture the world from your own perspective

Pateikta prekės informacija yra orientacinio pobūdžio. Techninės savybės, nuotraukos, aprašymai ir kaina gali keistis be išankstinio perspėjimo. Gamintojas ir pardavėjas neatsako už galimus duomenų neatitikimus ar tipografines klaidas. Prieš įsigyjant rekomenduojame pasitikrinti aktualią informaciją.

The integrated 12 MP camera allows you to capture photos and videos in quality optimal for vlogging, documenting or simply sharing your perspective with others. The camera is centrally located, so your recordings are consistent with what you actually see.

### Unobtrusively lightweight

Despite its capabilities, the camera weighs just 1.35 grams, making its presence virtually unnoticeable when worn. The compact design does not affect the convenience of the AR glasses, while adding entirely new functions.

### Combining the real and virtual worlds

Combined with the Beam Pro adapter, the camera allows you not only to record an augmented reality view, but also to share it. You can show others what your AR environment looks like in real time - at work, playing games or creating content.

### Included

- camera
- user manual
