Aprašymas

TELESIN Photography Kit (Master Lens Teleconverter + Phone Case) for the iPhone 17 Pro Max

Discover new possibilities in mobile photography with the TELESIN kit, which lets you take stunning portraits, photograph distant subjects, and record videos with greater freedom. With the 2x optical teleconverter, you can achieve a focal length equivalent to 105 mm when using the iPhone’s main camera or 200 mm when paired with its telephoto lens. This solution lets you capture more detail and achieve natural background blur without having to rely solely on software effects. High image quality is ensured by an advanced optical design consisting of 5 elements in 3 groups, utilizing ED glass with properties similar to fluorite. The kit includes the teleconverter and a matching phone case and is designed for the iPhone 17 Pro Max.

Portraits with natural blur and impressive detail

Attach the 2x teleconverter to the iPhone’s main camera with a native focal length of 24 mm and set the magnification to 2.2x to achieve a focal length equivalent of 105 mm. This allows you to take full advantage of the main camera’s f/1.78 aperture, achieving an attractive bokeh effect and clearly separating the subject from the background. On the other hand, combining the teleconverter with the native 100 mm telephoto lens allows you to achieve a focal length equivalent to 200 mm, which is useful when photographing animals, landscapes, and other distant subjects. The optical design with a resolution of 200 lp/mm minimizes light loss, ensuring a clear, detailed image. The use of ED glass helps reduce optical imperfections, and a distortion rate of no more than 2% ensures faithful reproduction of the scenes being photographed. Additionally, the AF coating reduces smudges and smears on the lens surface, making it easier to keep the lens clean.

Greater Stability and Creative Freedom

The TELESIN Master Lens teleconverter features a compact design measuring 52.7 × 47 mm and weighing just 129 g, so it doesn’t add excessive weight to your smartphone when shooting handheld. Its light weight helps minimize camera shake and reduces the load on the OIS optical image stabilization mechanism, making it easier to capture sharp photos at high magnification. Additional capabilities are provided by the Reef Color app, available on the App Store, which offers electronic image stabilization (EIS) with gyroscopic synchronization. The system continuously corrects for minor hand movements, enabling smooth panning while recording videos without the need for a gimbal. Importantly, stabilization requires cropping the frame by only about 10%. The app also offers Polaroid and EOS color effects, allowing you to give your photos a distinctive look. You can further expand the kit with compatible CPL, VND, and Black Mist filters, and the included classic lens hood makes it easier to shoot in bright light.

Included in the set

- Master Lens teleconverter x1
- Phone case x1
- Lens adapter plate x1
- Classic lens hood x1
- Lens cap x1
- Lens pouch x1

Manufacturer	TELESIN
Model	P5-FLT-015-TIP
Compatibility	iPhone 17 Pro Max
Lens Material	Aluminum alloy, PU
Lens Dimensions	52.7 × Ø47 mm
Lens Weight	129 g
