121.99€

PC cases are our thing. We've cut our teeth on the subject, so it's hard to impress us, but looking at the ENDORFY Arx 500 ARGB gives us goosebumps. It's pride – although some say it's because of the low temperature inside the case.

We've put our best solutions (including 4 Stratus 140 PWM ARGB fans) into it. As a result, you get one of ENDORFY's largest (it's 486×228×429 mm, which is slightly shorter than Arx 700 series) cases - with enough space to fit a tall cooling system (up to 179 mm), 7 fans, and most graphics cards (up to 350 mm). The exterior looks cool, too - with the tempered glass window and finely perforated steel panels (front and top) that act as filters, our Arx 500 ARGB is a true beauty.

We love fresh air!

We all know that long hours at work and on the battlefield (yes, there's a difference) = red-hot components begging for a break. With the Arx 500 ARGB, you don't have to worry about such things - the case helps to keep them pleasantly cool even when you're going crazy with your PC.

This is thanks to the spacious interior, which can fit up to 7 air conditioners fans. What's more, the front and top panels are also filters, so there's no need for additional dust covers. Compared to traditional solutions, a single layer of filters improves air circulation and makes it easier to keep the components in a pleasant breeze (because cooling is extremely important to us).

The lord of the rings storms

When you look inside the Arx 500 ARGB, you immediately see a team of fans at work. We've equipped our PC case with 4 Stratus 140 PWM ARGB fans - created in cooperation with Synergy Cooling, so you can be sure of sufficient airflow and low temperatures. Because winter never surprises us.

The Stratus 140 PWM is one of our favorites. It's 14 cm tall and has an optional semi-passive mode so you can work without monotonous background noise even when other fans are screaming for help. And it spins on a durable FDB bearing for smooth operation in all conditions. With such a package, you are like the real lord of the rings storms.

Perforated panels 3

If we were to talk about the best - in our opinion - feature of the Arx 500 ARGB, we'd go with the excellent ventilation. This is provided by finely perforated steel panels (among other things, including the great fans). Some will probably say that you can add another layer of filters - but the truth is that the double dust cover would restrict the airflow like metal armor at LARP.

And no one likes to stew their... components.

That's why we made sure that the front and top panels of our case act as filters. This single layer of protection keeps the inside of the case cool as a winter morning, and you don't have to install additional dust covers. What's more, each filter can be removed and cleaned with a cloth or vacuum cleaner (or rinsed under running water) – and it literally takes only a moment.

The pretty one

We've already said it, but we'll say it again – if there's ever a contest for the prettiest case, the Arx 500 ARGB has a chance to win. All we have to do is turn on the fans with the ARGB lighting inside and the title is ours. With the tempered glass side, it looks like a dream.

Everything in order!

If you asked us to describe the Arx 500 ARGB in four words, we'd say that everything is in order. Literally – it's one of our largest cases, so it can easily fit everything that's important to you. We mean the components, of course.

The Arx 500 ARGB measures 486×228×429 mm, so you can pack a lot into it – for example, a tall cooling system (up to 179 mm), 7 fans (including 4 you get from us for a good start), and most graphics cards available on the market (up to 350 mm). A large power supply will also fit – you can mount it in the most convenient position for you. Its installation is a piece of cake, as we've added a special mounting frame.

Light in a tunnel case

PC equipment without ARGB is fine, but sometimes it's nice to see the light in the tunnel case. With the Arx 500 ARGB you have it all – with just one click your components will light up with a flamboyant glow (the RESET button on the top of the chassis is responsible for the control). Thank the ARGB fans for this.

Thanks to the 4 Stratus 140 PWM ARGB fans (we pre-installed them for you), you can freely configure the backlighting. With the built-in PWM and ARGB controllers, you can set it up in no time. Everything is instantly combined into one functional package compatible with ENDORFY's ARGB-labeled products (and compatible products from other manufacturers), so you can synchronize the
