leads to less power waste, less heat and less fan noise. And with the support of Intel processors, it will save more energy and more money.

### **HIGH QUALITY JAPANESE CAPACITORS**

The main capacitors are high quality Japanese capacitors, to produce the efficient performance and to ensure the longer reliability.

### **120MM SMART HYDRAULIC BEARING (HYB) FAN**

The fan speed is adjusted according to the automatic power detection and will stop when the system is idle or under low load (less than 20% load). The Hydraulic Bearing fan provides longer and more stable life time.

### **SINGLE +12V RAIL**

Single +12V rail provides the best power output, stability and compatibility for the hardware. It provides the easiest way to install the power cable. And it is the best design for overclocking.

### **PROTECTION**

In order to make sure the entire computer system to operate stably under any conditions, we not only added protection designs such as OCP, OTP, OVP, OPP, UVP and SCP, but also ensured the stable operation of your system through the safety certification of various countries.
