All GOODRAM memory modules are manufactured in Poland (Europe) with highly selected components and undergo a multi-stage quality tests before setting off for a trip to retail stores. The Quality Control Department ensures that each module is perfectly prepared for many years of use, hence we guarantee our users a lifetime warranty.

Energy efficiency & stable operation

Compared to older solutions, DDR4 modules have a 1.2 V supply voltage, which enables reduction of operating costs and increase in energy savings by up to 40%. DDR4's different PCB design vs. older generations, significantly increases the resistance to mechanical damage as well as voltage spikes within the device. As a result, DDR4 modules are characterized by reliability and stability even under the least favorable operating conditions.
