## **RGB, EVOLVED**

Unleash your inner gamer with the futuristic Aura RGB lighting on the ROG Phone 6. The famous ROG Fearless Eye dot-matrix logo on the rear can be given a fantastic color-gradient appearance using two different colors simultaneously. You can also personalize the lighting with a huge choice of colors and several preset mood-lighting schemes.

## **POWER, EVOLVED**

Are you ready for the invincible power of the Snapdragon® 8+ Gen 1 Mobile Platform? Its unrivaled performance puts it in a class of its own, with the clock speed now boosted to a mind-blowing 3.2 GHz<sup>2</sup> — with up to 15% better CPU performance<sup>2</sup> and 20% more power efficiency<sup>2</sup> over the previous Snapdragon® 888 on the ROG Phone 5.

Our world-famous Armoury Crate performance manager unlocks even more performance and tuning controls, giving the ROG Phone 6 complete mastery of this amazing CPU's power to vanquish any task!

## **THERMAL, EVOLVED**

The upgraded GameCool 6 cooling system on the ROG Phone 6 has an optimized thermal design that cools the CPU from every direction. With GameCool 6, three different approaches to cooling are used to improve stability for demanding games. Firstly, the Boron Nitride (BN) thermal compound on one side of the CPU reduces thermal throttling during short gaming sessions. Secondly, the enlarged vapor chamber and graphite sheets dissipate heat from the other side of the CPU more efficiently during mid-length gaming sessions. And finally, for long-term stability, the new AeroActive Cooler 6 incorporates an AI-powered active cooling system, using a Peltier cooling element that provides additional surface cooling with a fan positioned exactly over the location of the system-on-a-chip (SoC).

## **ALL-NEW 360° CPU COOLING TECHNOLOGY**

For the first 15 minutes of gaming, the most important task is to ensure that the heat from the CPU is conducted to all thermal components for dissipation.

The 3,300 milligrams of BN thermal compound transfers heat from the side of the CPU opposite the vapor chamber, dissipating the heat from chip much more efficiently, and ensuring maximum performance of the CPU and GPU for a stable gaming framerate.
