70MAI M310

The 70mai dash cam M310 is a state-of-the-art in-car camera that provides excellent recording quality in 1296P resolution for easy identification of objects and number plates. Equipped with WDR technology and an F2.0 aperture, it performs well in a variety of lighting conditions, capturing extremely clear recordings both day and night. With a wide 130° viewing angle, it minimises the risk of blind spots, while the 24/7 parking surveillance function and advanced G-sensor take care of your vehicle's safety by automatically initiating recording of incidents while driving and at a standstill.

Excellent image quality

With a resolution of 1296P, the M310 dash cam captures exceptionally clear and detailed footage that makes it easy to recognise key elements such as objects on the road or number plates. Even in difficult lighting conditions, such as low light at night or intense sunlight, the image remains clear and full of detail. The high resolution ensures accuracy, which is particularly important when analysing traffic incidents.

WDR technology

The M310 dash cam's Wide Dynamic Range (WDR) technology provides excellent contrast balance, resulting in clear and detailed recorded images regardless of lighting conditions. The dash cam effectively handles both very bright and dark areas of the frame, automatically adjusting to changes in lighting. This means that even in situations where there are harsh shadows or intense light sources – such as when driving against the sun or at night with street lights – the image remains extremely clear.

In addition, thanks to its F2.0 aperture, the M310 dash cam is able to collect the optimum amount of light, which makes a significant difference to the quality of recordings, especially at night or in poorly lit conditions.

Wide point of view

The 130° wide angle lens captures more of the surroundings, allowing the camera to capture more of the important elements on the road, minimising the risk of missing important details.

Collision detection - automatic recording of events at critical moments

The M310 dash cam is equipped with an advanced collision detection system that provides uninterrupted protection on the road. Thanks to G-sensor technology, the device has the ability to detect unusual bumps that may indicate a serious event such as a collision or accident. As soon as the sensor registers such an action, it automatically activates the recording mode. The collision detection function increases the safety of both the driver and other road users by eliminating the risk of missing significant events.

The camera records video footage 5 seconds before the incident is detected and 25 seconds after.

24/7 parking surveillance - protecting your vehicle 24/7

The M310 dash cam's 24-hour parking surveillance function provides uninterrupted protection for your car, regardless of the time of day or night. Thanks to its advanced G-sensor, the dash cam is able to detect any irregularities such as collisions or sudden shocks. As soon as the sensor registers such an event, the camera automatically triggers emergency recording, allowing you to record the situation immediately.

Time-lapse recording

The M310 dash cam's time-lapse recording function captures the surroundings at a rate of 1 frame

per second in parking mode for effective vehicle monitoring. The camera compresses each 30 minutes of recording into a 1-minute clip, saving space on the memory card.

Faster playback allows instant access to important moments, making it easier to analyse events without having to sift through lengthy recordings.

To use parking mode and time-lapse recording, it is necessary to connect the 70mai Hardwire Kit UP03 power module, which is sold separately.

Loop recording

The M310 dash cam acts as a reliable gatekeeper, constantly recording everything that happens on the road. Thanks to the loop recording function, the device automatically overwrites the oldest recordings with new ones, ensuring a continuous record of events without interruption. You don't have to worry about running out of space on the memory card at a crucial moment, as the camera manages the space itself, eliminating the need to manually delete older video files.

Emergency video events are automatically locked in a special folder and are not overwritten.

Voice control

With voice control, you can easily give commands to the 70mai M310 dash cam without taking your hands off the wheel. Simply use voice commands to initiate various actions, such as taking a photo, starting emergency recording, or activating or deactivating audio recording.

Control via dedicated app

With the Polish-language 70mai app, you have full control over your dash cam, including recording time settings, resolution and G-sensor sensitivity. The app allows you to quickly download recordings to your phone, view live video and take photos, making it easy to monitor situations on the road and archive important moments.

- 1296P QHD resolution
- Aperture F2.0
- Excellent night-time recording quality (WDR)
- Viewing angle 130°
- 24-hour parking surveillance
- Time-lapse recording
