reading S.M.A.R.T. disk status monitoring information. Standby support when idle.

A unique feature, thanks to the new chipset, is the possibility of using both M.2 NVMe and SATA disks. You don't have to think about which type of M.2 drive the adapter is designed for, it simply reads all types. Another advantage of the adapter is the ability to insert the disc into the adapter slot very quickly. Changing discs is also easy. These features make the adapter a very handy and useful tool for frequent work with different types of drives. This makes it an ideal tool for testing disks, transferring, backing up and restoring data, etc.

Thanks to its small size, it can be readily at hand at any time. The adapter does not prevent heat dissipation from the disk, this prolongs its lifetime and also prevents the disk from slowing down the speed of the disk, so-called. „Thermal Throttling“. This USB-C to M.2 drive adapter can be used with computers and laptops as well as mobile phones and tablets.
