## Aprašymas

### Auto Streamline™ Conveyor Belt for the xTool F2 Ultra

The Auto Streamline™ belt conveyor for the xTool F2 Ultra engraver enhances the machine’s capabilities by expanding the working area from 220 × 220 mm to as much as 220 × 500 mm. This makes it possible to engrave larger items or work on multiple projects simultaneously without having to manually move the material. The automatic transport system enables smooth, continuous operation, which translates to significantly higher productivity and time savings in mass production.

### Automation and Increased Productivity

The Auto Streamline™ system enables the creation of entire batches of products in a virtually hands-free manner—simply place the items on the conveyor belt, and the machine takes care of the rest. This solution works particularly well in mass production, where repeatability and speed of execution are key. It provides practical support for both small workshops and more demanding production applications.

### Smart camera integration

Integration with the camera system allows for easy preparation of designs and their precise placement on the material. This makes the batch production process fast and intuitive, while minimizing the risk of errors. Simply place the components on the conveyor and start the process to achieve consistent and accurate results.

### Ready to use right away

The Auto Streamline™ conveyor is pre-assembled and easy to use, allowing you to get started quickly—without complicated setup. It’s a solution that combines the performance known from industrial applications with the convenience of use in home or workshop settings. Whether you’re creating decorations, accessories, or functional items, you can work faster and more efficiently.
