

Revopoint High-Precision Encoded Calibration Plate

Modelis: HPCCB

Gamintojas: REVOPOINT

EAN: 6975577880888

Prekės kodas: 560680

86.99€

Revopoint High-Precision Calibration Plate

The Revopoint high-precision encoded calibration plate is a practical tool that allows you to quickly restore the accuracy of your 3D scanner after intensive use. The kit is designed for a simple calibration process, so you don't have to waste time on complicated settings—just unfold the mat and start the procedure.

Precise calibration in all conditions

The use of coded patterns on the surface of the plates allows the scanner to accurately recognize reference points. In practice, this means more stable measurements and a lower risk of errors during scanning. Regular calibration directly translates to the quality of 3D models, especially with prolonged use of the device.

Large working surface

Large-size plates provide more workspace, making it easier to position the scanner and improving the convenience of the entire process. A larger calibration area allows the device to read data more accurately, resulting in better detail reproduction.

Durable construction

The use of PVC material ensures adequate rigidity and wear resistance. As a result, the plates retain their properties even with frequent use, which is particularly important in a professional or workshop environment.

Compatibility with Revopoint devices

The kit is designed to fit popular Revopoint scanner models, eliminating the issue of accessory compatibility. This allows the user to proceed directly to calibration without additional preparation.

Included

- Calibration plates x4
- Calibration mat x1
- User manual x1

Manufacturer Revopoint

Model	HPCCB
Size	410 × 260 × 8 mm
Material	PVC

Compatibility MIRACO, MIRACO Pro, MIRACO Plus
