Aprašymas

COLMI V03 smart glasses Round frame, blue light blocking

COLMI V03 is an innovative combination of smart image recording features, extensive communication capabilities, and advanced artificial intelligence. This compact gadget, styled like classic glasses, allows you to record 1080P videos and take 2K HD photos from a first-person perspective. Equipped with a modern image stabilization system, automatic image quality correction, and the ability to instantly recognize objects and translate in real time, it becomes a mobile assistant that analyzes the environment and supports the user in their daily activities. Thanks to Bluetooth and Wi-Fi integration, data is transferred smoothly and automatically to your phone, and comfortable touch and voice control makes the device intuitive and quick to use.

Video and photo recording with advanced optics

The glasses are equipped with an 8 MP camera that can record Full HD videos and take 2K photos. Built-in image stabilization eliminates vibrations, resulting in smooth and clear shots. The automatic image processing system uses HDR techniques, noise reduction, and background blur, which significantly improves the quality of the footage—without the need for manual editing.

Intelligent recognition and AI support

Advanced artificial intelligence analyzes images in real time, enabling the recognition of objects, monuments, plants, and restaurant menus. The user receives voice messages directly in their ear. Thanks to the support of large language models such as ChatGPT and DeepSeek, the glasses

enable natural conversations, asking questions, generating content, and solving problems, becoming a mobile office and educational tool.

Audio and communication features

Thanks to the open design of the speakers, the user can listen to music or talk on the phone while remaining aware of their surroundings. ENC technology reduces external interference, ensuring clear sound during conversations. The glasses support real-time voice translation, making them an ideal tool for travel and international communication.

Connectivity and automatic synchronization

The use of two communication modes – Bluetooth 5.3 and Wi-Fi – guarantees fast and energy-efficient data transfer. The material recorded by the glasses is automatically synchronized with the phone, eliminating the need to manually export files. This system ensures continuity of operation and protection of user data.

Comfort of use and modern control

The frame design has been optimized for long-term wear. A three-point mechanical support system distributes the weight of the device, preventing pressure points. The glasses offer convenient touch and voice control – from waking up the AI assistant to adjusting the volume and controlling multimedia with gestures on the touch panel.

Long battery life and fast charging

The 230 mAh battery allows for approximately one hour of recording or up to 7 hours of music listening. The device charges in 60 minutes and can remain in standby mode for 5 to 7 days. The IP65 waterproof rating protects it from splashes, making it resistant to everyday conditions.

Intuitive operation and full control

The glasses are equipped with physical buttons and a touch panel on the temples. These allow you to easily start recording, take a photo, change a song, or activate the assistant. Each function has been optimized for quick access without the need to take out your phone.

Included in the set

- Glasses case
- Fabric cover
- AI glasses
- Multilingual user manual
- Cleaning cloth
- Charging cable

Manufacturer	COLMI
Model	V03
Dimensions	150 x 150 x 51 mm (width x temple length x height)
Color	Black
Buttons	2x physical buttons (left and right); 1x side touch area (slider)
Compatibility	Android, iOS, Harmony OS
Water resistance	IP65
Bluetooth	BT 5.3

Bluetooth range	≥12 m
Camera	8MP (800W); 1080P video; 2K photos
AI features	ChatGPT, DeepSeek, image recognition, simultaneous translation
Audio	Hi-Fi Stereo; open-ear design; ENC noise reduction
Battery capacity	230 mAh
Charging time	Approximately 60 minutes
Operating time (audio)	Approximately 7 hours
Operating time (video)	Approximately 1 hour
Standby time	5–7 days
