LEPRO ZB1-30 Wi-Fi String Lights, 30 m

The 30-meter LEPRO ZB1-30 Wi-Fi string lights let you create a unique atmosphere on your patio, balcony, in the garden, or at home parties—exactly the way you want it to be that day. Each of the 30 bulbs can glow in a different color thanks to RGB+IC technology with independent control, opening up vast possibilities for customizing lighting effects. Smart control via the app, voice command support, integration with Alexa and Google Assistant, and the advanced AI LightGPM 4 system make lighting configuration fast, intuitive, and enjoyable. The warm 2700K light is perfect for evening relaxation.

Individual lighting for each bulb

The use of RGB+IC LEDs with independent control allows you to assign a separate color to each bulb and create dynamic, multicolored lighting compositions. This makes the string light more than just classic decorative lighting with a single effect for the entire set—you can create your own scenes,

color transitions, and animations perfectly suited for holidays, parties, movie nights, or the everyday atmosphere on your patio. The Lepro app offers far more possibilities than traditional remote controls, and it's constantly updated with new features and ready-made DIY projects that let you make even better use of the lighting's potential.

Warm light for evening relaxation

The string lights delight with their colors, but also create a cozy atmosphere thanks to their subtle light with a color temperature of 2700K. The color, reminiscent of classic incandescent bulbs, is perfect for quiet evenings in the garden, dinner on the terrace, or unwinding after work. You can conveniently adjust the brightness in the Lepro app, tailoring the light intensity to the situation. If you don't have your phone handy, simply use the integrated controller on the cord to turn the lights on or off, and the string will automatically remember the last mode used.

Lighting designed just for you

The LEPRO ZB1-30 uses the Lepro LightGPM 4 system, which acts as a personal lighting designer powered by artificial intelligence. Simply tell the app what moods, colors, or effects you like, and the system will start generating suggestions tailored to your preferences. What's more, the AI "learns" from your choices, so over time it gets even better at matching your taste and interior design style. This solution lets you move away from repetitive, pre-made presets and create a space with an individual, unique character.

All it takes is a photo to create the right atmosphere

The image recognition feature lets you take a photo of a room or upload an image, a movie poster, or your favorite game character, and the LightGPM system will automatically prepare matching lighting. This allows you to tailor the atmosphere to a specific interior, event, or aesthetic in just a few moments without manually adjusting colors and effects. This is an extremely convenient solution for those who want to quickly achieve a cohesive result.

Voice control and full smart home integration

The string lights work with Amazon Alexa and Google Assistant, allowing you to control the lighting with simple voice commands. Just say you want to create a party atmosphere, enhance the holiday mood, or match the lighting to a movie or game, and the app will prepare the appropriate settings in seconds. Please note that Alexa’s command capabilities are partially limited (for example, not all functions related to simultaneously changing brightness and colors are supported directly by the voice assistant).

Expandable to up to 30 bulbs

The set uses a 12V power supply and includes 30 bulbs arranged along a 30-meter cable, providing great flexibility in arranging your space. The included power supply supports a maximum load of 16.5 W. This makes the lighting suitable for a small balcony, as well as a larger terrace, patio, or garden lounge area.
