Ottocast OTTOAIBOX P3 Pro Android Wireless Adapter

The Ottocast OTTOAIBOX P3 Pro Android Wireless Adapter is a compact device that you connect to your car's USB port to expand its capabilities with wireless CarPlay and Android Auto, a full Android 13 system with the OttoDrive 3.0 overlay, internet access (Cloud SIM or SIM card), smart voice control, and multimedia features, including support for additional screens via HDMI. Thanks to the 8-core Snapdragon 6225 processor, everything runs smoothly and stably, allowing for convenient use of navigation, music, apps, and streaming—without cables and without complicated installation.

Smooth performance and the OttoDrive 3.0 system

The adapter runs on Android 13 with the proprietary OttoDrive 3.0 overlay, resulting in a clear and intuitive interface. The system responds quickly, and switching between apps is smooth even during heavy use. The entire system was designed with the driver in mind, so the most important features are easily accessible while driving. Additionally, the interface can be customized to your preferences, including changing the layout of widgets and the units of displayed data.

Wireless CarPlay and Android Auto

After the initial pairing, the adapter automatically connects to your phone every time you start the car. No cables means greater convenience and less clutter in the cabin. The system runs smoothly, so you can easily use maps, make calls, and listen to music. This solution works especially well for everyday driving, where speed and simplicity matter.

Android Apps and Split-Screen Function

With a full Android system, you can install and use apps directly on the car's screen. This offers more freedom than standard multimedia systems and allows you to tailor features to your own needs. Additionally, the split-screen feature allows you to display two apps simultaneously, such as navigation and a music player. As a result, you can conveniently control your route and multimedia without having to switch between views.

Internet connection flexibility

The device offers a Dual Internet feature that lets you choose how to connect to the network. You can use Cloud SIM, which provides internet access without a physical SIM card, simplifying setup and eliminating the need to use your phone's hotspot. Alternatively, you can insert a SIM card and use an independent 4G LTE connection. This gives you greater control over connection stability and how you use the internet.

Entertainment without limits - not just for the front seat

The built-in HDMI output allows you to stream video to additional screens in the car. Passengers can watch movies or use apps on the headrest monitors while the driver uses navigation on the main screen. This solution enhances travel comfort, especially on longer trips. This way, every passenger

can enjoy entertainment at their own convenience.

Smart voice assistant

The built-in smart voice assistant allows for hands-free control of functions. You can give simple commands regarding music, navigation, or basic settings. This reduces the need to use the screen while driving, which improves safety. Voice control also makes using the device more intuitive.

Interface tailored to European standards

The system displays data in units used in Europe, such as km/h for speed and bar for pressure. This means you don't have to convert values while driving. The interface is fully customizable, so you can tailor it to your preferences and habits. This is especially important for users who value clarity and simplicity.

Plug & Play Installation and Compatibility Information

Installation involves connecting the adapter to the car's USB port. It requires no tools or modifications to the car's interior. After a quick setup, the device is ready to use. This makes the adapter accessible to virtually any user. The adapter works exclusively in cars factory-equipped with a wired Apple CarPlay system. This means that the car's USB port must support data transmission for CarPlay, not just charging. The device will not work in older vehicles without this feature. It is advisable to check your car's compatibility before purchasing.

Included
