NVMe M.2 external drives, ensures your data transfer will be 10x faster than with a standard cable or AirDrop wireless connection.

Thanks to the integrated E-Mark chip, the cable can charge connected devices with a current of 5A up to 100W. It is compatible with Power Delivery 3.0, Quick Charge 4+ or Quick Charge 3.0 charging technologies for very fast charging not only smartphones and tablets, but also laptops. Compatibility is also ensured with other fast phone charging standards such as Apple iPhone, iPad, Samsung. The main advantage of the power cable is the Power Delivery 3.0 standard for charging Apple MacBook, Lenovo, Asus, HP, Dell and other laptops. You can charge your laptop directly from a USB-C charger or with the increasingly popular docking stations and port replicators.

Cable conductors are made of Tin-plated oxygen free copper. Power cables 22AWG (lower number = larger cross-section and lower wire resistance) and 32AWG data wires guarantee fast charging and reliable data transfer of connected devices. High-quality cable insulation, made of flexible TPE, guarantees maximum durability and also maintains sufficient flexibility. Triple shielding protects transmitted signals from adverse interference.

The cable is equipped with aluminum end caps, connectors with nickel-plated surface and gold-plated contacts. The final strength of the cable is provided by the nylon braid. The braid in combination with a cable gland significantly reduces dangerous cable bending. The cable life is extended to more than 8000 standard bends. The bonus is the included practical strip for easy packing of the cable.
