Aprašymas

GODOX Litemons LP400R RGB LED Light Panel

The GODOX Litemons LP400R RGB LED Light Panel allows you to create professional lighting for photo shoots, video recordings, and live streams. Thanks to its high brightness, wide color temperature range, and ability to produce colored light, it offers great flexibility in setting the mood for every shot. Advanced color modes make it easy to experiment with lighting, and the Godox Light app allows for convenient control of settings right from your smartphone. The included diffusion panel provides soft, evenly diffused light, which is ideal for filming and photographing people. The entire unit stands out with its elegant, compact design, which—along with the practical carrying case—makes it easy to use the equipment both in the studio and on location.

Bright Light and Extensive Adjustment Options

The GODOX LP400R was designed for creators who demand high brightness and flexibility when working with light. The panel offers a wide color temperature range from 1,800 K to 10,000 K, allowing you to achieve both very warm, moody lighting and cool tones suitable for modern settings. This allows you to easily adapt the character of the light to the conditions on set, the subject being photographed, or the intended visual effect. Its high luminous efficiency allows the panel to be used in a variety of lighting setups, from simple recording stations to more elaborate studio setups.

A Full Color Palette for Creative Artists

The ability to generate RGB light opens up new ways for photographers and videographers to set the mood and highlight the character of a scene. The GODOX LP400R offers professional color modes that allow you to achieve intense, vivid colors and create striking lighting compositions. Color accents can give portraits a more expressive character, highlight details in product shots, or completely transform the atmosphere of a home studio. With such a wide range of possibilities, the panel is ideal for both classic photo shoots and creative projects where lighting plays a crucial role in telling a visual story.

Convenient Control with the Godox Light App

Adjusting the lighting to suit the needs of a specific shot doesn't require walking over to the panel every time. Thanks to integration with the Godox Light app, you can conveniently change lighting settings and switch between scenes directly from your mobile device. Particularly useful is the ability to manage multiple compatible lights simultaneously, allowing you to synchronize their operation and more efficiently control complex lighting setups. This solution simplifies session organization, allows for quick adjustments to the setup, and gives the creator greater freedom while photographing or recording.

Soft, even, eye-friendly light

The built-in diffusion panel ensures even light distribution, helping to achieve softer and more natural-looking lighting. As a result, the GODOX LP400R is ideal as a fill light for live streams, video conferences, video recording, or creating content for social media. The soft lighting characteristics help create an image that is easy on the eyes, and the reduction of harsh light helps minimize eye strain during extended use. The diffuser also serves a protective function, shielding the LEDs located beneath it.

Compact design ready for field use

The GODOX Litemons LP400R combines modern design with features that simplify everyday use. The durable housing has an elegant appearance, and its compact, lightweight, and sturdy construction makes it easy to move the panel between locations. A 360° rotating handle allows you to conveniently position the unit for storage and transport. The kit also includes a specially contoured, durable, shock-resistant case that helps protect the equipment during transport. This makes the panel a practical solution for creators working in various locations—from home studios to professional photo sets to on-location shoots.

Included

- GODOX Litemons LP400R LED light panel
- protective case
- user manual

Manufacturer	GODOX
Model	Litemons LP400R
