VIOFO A129 PLUS DUO-G 2K + 1080p WiFi, GPS video recorder

The VIOFO A129 PLUS DUO-G is a dual-channel video recorder equipped with Sony Exmor R STARVIS sensors for high image quality even in low light. It has a built-in Wi-Fi connection for control via a dedicated app, a 2-inch HD display, an external GPS for speed and route recording, and a capacitor instead of a battery for longer life and greater resistance to heat and cold. This is the perfect device for any driver.

Dual-channel recording and reliable sensor

The front and rear cameras record ultra-high quality video at the same time, with the front at 1440P 30 fps and the rear at 1080P 30 fps. Matching Sony sensors in both cameras ensure excellent performance even in low-light conditions. The Sony Exmor R STARVIS sensor in the camera allows it

to capture vivid colors and plenty of detail in almost any lighting conditions. This ensures that no detail will escape your attention, regardless of the situation on the road.

Dedicated app for multiple functions

The VIOFO app allows you to remotely control the camera via your smartphone. Available functions include full control of the device, live viewing, video playback and recording. The transfer of all files takes place in an extremely short time, all thanks to the use of 2.4 GHz Wi-Fi connectivity. Explore even more possibilities with the app and don't let anything limit you!

Impressive HD screen and external GPS

With a 2-inch HD display, you can easily set up and review recordings, a convenient alternative to using Wi-Fi and a smartphone. The GPS module records speed and route data in the video file, allowing compatible players to display this information during playback. The module also synchronizes the camera's clock with GPS time so that the recordings are properly time and date stamped.

Note: If you use the VIOFO app to play back recordings and view the GPS map, download the video to your device first.

Additional options for better use

Available for sale separately, the CPL (Circular Polarizing Lens) filter reduces reflections and glare from the windshield and road surface to improve image quality. It works similarly to polarized sunglasses. You can also equip yourself with a Bluetooth remote control, which you mount conveniently on your dashboard. It allows you to protect important recordings from being overwritten without having to take your eyes off the road.

Capacitor power supply

The use of a capacitor (instead of a battery) ensures a wider operating temperature range and longer life of the device. This guarantees reliable operation both in extreme heat and severe cold. From now on, nothing will surprise you and you can count on full functionality of the equipment in any situation.

Parking mode and additional support with HK3 ACC

The video recorder offers a parking mode that protects your vehicle at all times, with recording triggered by motion or impact detection. So you don't have to worry about navigating through a parking lot - everything is carefully monitored. In addition, with the optional ACC detection function, the DVR automatically switches to parking mode when you turn off the engine, and returns to normal recording when you start the engine.

Special static sticker

A static sticker that eliminates vibrations and adhesive marks on the windshield can be particularly useful for company, fleet or rental car drivers. It is an economical and reliable alternative to the suction cup holder and the traditional adhesive sticker.

Included

- front camera
- rear camera
- car charger
- mini USB cable
- cable for front camera (6m)
- GPS holder
- trim removal tool
- windshield stickers 2x
