Modelis: A129 Pro Duo-G

Gamintojas: VIOFO

EAN: 6972147070663

Prekės kodas: 70260

237.99€

VIOFO A129 PRO DUO-G 4K + 1080p WiFi, GPS video recorder

The VIOFO A129 PRO DUO-G is an advanced dual-channel video recorder, capturing video in 4K on the front and 1080p on the rear. Equipped with two Sony sensors, it enables clear recordings even at night. Built-in Wi-Fi (2.4/5 GHz), an external GPS module and support for various parking modes (event detection, time-lapse, low bit rate recording) make it a leader in its field. The device offers a high-temperature protection system, can work with a CPL filter and supports three recording modes (emergency, looping, motion detection). Its installation is quick and intuitive thanks to a special window sticker.

Dual-channel recording

The Ultra HD 4K front camera can work with the rear camera to record dual-channel video. The front camera offers a wide viewing angle of 130° so you won't miss anything. In addition, the lens with F1.8 aperture and 7-layer lens provides extremely detailed images both day and night. This will help

you capture license plates and other key features, regardless of road conditions. The video recorder offers 3840 × 2160P 30 fps resolution for the front camera and 1920 × 1080P 30 fps for the rear camera. It's reliability that will transform your daily driving experience.

Advanced Sony sensors

The A129 Pro Duo is equipped with Sony Exmor R 8 MP and Sony Starvis 2 MP sensors for both channels, resulting in brighter and clearer images with rich details even in low-light conditions. It provides exceptional night recording quality, which is extremely important in any situation. VIOFO is a guarantee of safety and full attention on the road every day.

Built-in dual-band Wi-Fi

Built-in Wi-Fi in the 2.4 GHz and 5 GHz ranges enables much faster transfer. With the 5 GHz band, transfer speeds can reach up to 8 Mbps. With the dedicated VIOFO app, you can control settings, preview live video, download recordings, and manage them. The app also offers downloading and editing of recordings, viewing data recorded by GPS, and control and configuration of the camera. With the VIOFO app, nothing limits you!

External GPS module

The GPS module accurately captures speed and route data in a video file for display on a compatible player. In addition, it synchronizes the time in the camera with the GPS time, so the recordings are correctly marked with the date and time. Note: if you are using the VIOFO app to playback recordings and view GPS maps simultaneously, it is required to download the recording to your phone before you start the process.

Three parking modes

The A129 PRO DUO-G offers three different options to make parking easier. Auto event detection is nothing more than automatically recording a video clip when motion or a shock or impact is detected while the vehicle is parked. Time Lapse mode is continuous recording at a low frame rate to save memory card space as well as power (playback looks like it's sped up). Low Bitrate Recording mode, on the other hand, involves continuous recording at normal speed, but at a low bitrate, which

significantly saves space on the card (audio is also recorded in this mode).

Additional accessories

Parking mode provides round-the-clock monitoring of a parked vehicle. When the engine is turned off, you can use the HK3 HCC power kit (sold separately), which provides constant power to protect the car battery from being discharged. With the optional Bluetooth remote control (available outside the kit), which can be mounted conveniently on the dashboard, you can quickly protect important recordings from being overwritten - without having to take your eyes off the road. It's a convenient solution that will allow you to fully focus on the road.

Protection against high temperatures

The A129 Pro Duo uses a heat dissipation design and a built-in sensor to monitor the temperature of the main chipset. The device automatically shuts down to protect the camera from overheating. This means that the equipment functions easily even in the hottest summers, giving you peace of mind and reliable operation.

CPL filter for better images and protection

Get the help of the CPL (Circular Polarizing Lens) filter, which effectively reduces glare and light reflections from the windshield and road surface. The CPL filter enhances the image quality so that every detail is accurately recorded, regardless of lighting conditions. It works in a similar way to polarized glasses. The filter is available for sale separately.

Three types of recording

The A129 PRO DUO-G offers three reliable recording modes. Emergency recording automatically detects a violent shock or collision, locking and protecting the recording from being overwritten. Loop recording overwrites the oldest recording with a new one when the memory card is full. Motion detection mode automatically starts recording when it detects movement around the vehicle. No matter what your requirements are - the VIOFO video recorder will meet your expectations.

Practical sticker

The static mounting sticker is especially recommended for drivers of rental, company and fleet cars. It eliminates vibrations and leaves no glue on the windshield, and is a cheaper alternative to a suction cup mount or a traditional adhesive sticker. See how much you can gain with a VIOFO video recorder!

Included

- front camera
- rear camera
- car charger
- mini USB cable
- rear camera cable (6m)
- GPS holder
- trim removal tool
- static windshield stickers 2x
- 3M mounting stickers for front and rear camera
- rear camera holder
- clips
- user manual

Manufacturer	VIOFO
Model	A129 PRO DUO-G
Recording resolution	Front camera: Ultra HD 4K (3840×2160 at 30 fps); rear camera: 1080P (1920×1080 at 30 fps)
