Aprašymas

This network camera features a 4 MP high-resolution sensor, delivering clear and detailed images suitable for security and surveillance applications. With a 2.8mm fixed lens, it provides a wide-angle view, ensuring comprehensive coverage of the area being monitored. The camera is designed for in-ceiling installation, offering a discreet security solution that blends seamlessly with the environment.

Equipped with AcuSense technology, the camera enhances target classification accuracy, distinguishing between human figures and vehicles from other moving objects. This capability reduces false alarms caused by non-threatening movements, such as animals or falling leaves, and improves the efficiency of event-triggered recordings.

The device supports H.265+ video compression technology, which significantly reduces bandwidth and storage requirements without compromising video quality. It also features a built-in microphone for audio recording, adding an additional layer of information to the surveillance footage.

For night-time monitoring, the camera is equipped with an IR range of up to 30 meters, providing clear images in low light conditions. It is also designed to be durable, with a robust housing that is resistant to dust and water, ensuring reliable performance in various indoor environments.
