Aprašymas

Enhance your network's efficiency and power management with this 8-port Fast Ethernet switch. Each port supports Power over Ethernet (PoE), allowing for the simultaneous transmission of data and power over a single network cable. This feature simplifies the cabling process and reduces the need for additional power sources, making it suitable for deploying network devices like IP cameras and VoIP phones in locations without convenient power outlets.

The switch provides a total power budget of 123W, with up to 30W per port, accommodating devices with higher power requirements. It also features smart PoE power allocation, which automatically adjusts power distribution based on the device's needs, enhancing the system's energy efficiency.

With a robust design, the switch operates effectively in a wide range of temperatures, ensuring stable performance in various environments. It also supports VLAN for traffic segmentation and enhanced security, and QoS for prioritizing network traffic, essential for optimizing the performance of business-critical applications.

This switch is designed for small to medium-sized businesses looking for a cost-effective solution to expand their network while ensuring sufficient power supply and data management capabilities.
