## Aprašymas

### ACER VERITON GN100 4 TB - AI COMPUTER WITH NVIDIA GRACE BLACKWELL

The Acer Veriton GN100 lets you run large language models locally, which is useful in media, publishing, PR agencies, and corporate communications departments. In newsrooms, one use is to support text-based work: proofreading, summaries, headline suggestions, searching publication archives, or preparing different-length versions of a text. Prepublication materials and information from sources stay within the newsroom, and the editor still has the final say.

### WHAT TASKS CAN AN AI COMPUTER HELP WITH?

It can also be used by marketing departments and training companies. A model can draft newsletters and expert articles, create training materials for different skill levels, answer frequently asked questions, or summarize industry reports for executives. Large models may handle long contexts and linguistic nuances better, but quality depends on the specific model, prompt, and source material.

### QSFP CABLE INCLUDED AND 4 TB DRIVE

According to Acer's specifications, a QSFP cable is included for connecting two GN100 computers via the NVIDIA ConnectX-7 card—so there's no need to buy a separate cable. The computer features an NVIDIA GB10 Grace Blackwell superchip with a Blackwell GPU (up to 1 PFLOP in FP4), 128 GB of LPDDR5X memory, and a 4 TB SSD with a PCI Express 4.0 interface. It also has a 10 GbE port, Wi-Fi 7, Bluetooth 5.4, HDMI, and four 20 Gb/s USB-C ports. The 150 × 150 × 50.5 mm enclosure weighs approximately 1.2 kg, the power supply's maximum output is 240 W, and NVIDIA DGX OS comes preinstalled.
