Aprašymas

An ergonomic mouse which fits like a glove.

Thanks to the patented shape, it is not necessary to grab the mouse and lift the finger, when you are operating it. Simply glide over the surface with the mouse. A lightly slant palm and finger supporting computer mouse requires least muscle activity in the hand and results in reduced neural excitation. Reduce the muscle activity in your hand and fingers and start working in the most natural, ergonomic, and comfortable way.

The patented design of the HandShoeMouse is based on several years of development work and the support of the Erasmus University Medical Center in Rotterdam in the Netherlands. The design, based on anatomical and field research, resulted in a supporting body which prevents excessive muscle tension in hand, fingers and thumb. The HandShoeMouse provides the user with a tool to operate a computer without provoking stresses and strains. The highly supportive shape prevents overload in joints, tendons, nerves, and muscles. Instead of grabbing the mouse in a tense posture, the full-surface support of hand, fingers and thumb ensures, that the pressure is distributed over a large area of the whole hand in a natural and pleasant 25 degrees angle.

- With the HandShoeMouse, the movement comes from the forearm and wrist. Therefore, the risk of the Carpal Tunnel and Repetitive Strain Injury Syndrome can be reduced.
