Exclusive gaming feature

Variable Overdrive

Integrated ASUS Variable Overdrive technology allows the display to dynamically alter its overdrive setting as frame rates fluctuate, ensuring optimal results for any game. You choose how strong you want the overall effect to be, then let the monitor take it from there.

In-game enhancements

Intuitive Controls

DisplayWidget Center software upgraded the user interface so that users can easily change monitor settings via a mouse — so there's no need to access the OSD menu.

Shadow Boost

ASUS Shadow Boost technology clarifies dark areas of the game without overexposing brighter areas, improving overall viewing while also making it easier to spot enemies hidden in dark areas of the map.

GamePlus

The ASUS-exclusive, integrated GamePlus hotkey offers in-game enhancements that help you get more out of your game. This function is co-developed with input from pro gamers, allowing them to practice and improve their gaming skills.

GameVisual

ASUS GameVisual Technology has seven pre-set display modes to optimize visuals for different types of content. This unique feature can be easily accessed through a hotkey or the on-screen display settings menu.

Flicker-Free technology

Flicker-Free technology reduces flicker to minimize eyestrain for improved comfort when you're embroiled in long gaming sessions.

LOW BLUE LIGHT

ASUS Low Blue Light technology reduces the amount of potentially harmful blue light emitted by the display. Four different filter settings are available to control the amount of blue light reduction.

ENGINEERING

Extensive Connectivity

A multitude of connectivity options, including two HDMI 2.0, plus DisplayPort™ 1.4, ensures wide compatibility with a variety of input sources.
