3Doodler is one of those fantastic ideas that seem so obvious in retrospect that it is hard to believe that they are only now being implemented.

The premise is simple: the pen draws with molten filament, which makes it possible to build 3D objects in the same way as a 3D printer, but without creating computer models.

The 3Doodler pen is extremely easy to use. To start creative fun, just put the selected filament color in the guide and after a while you can start creating. You are only limited by your ingenuity!

Creating with 3D printing has never been so easy and fun !!!
