Aprašymas

This industrial-grade router is designed to facilitate robust and secure internet connectivity in various environments, including remote and industrial settings. It supports 4G LTE technology, ensuring fast and efficient data transmission speeds. The device is equipped with dual-SIM functionality, which provides a failover backup to maintain connectivity in case one carrier network fails. The router features advanced security protocols, including firewall and VPN functionalities, to safeguard data transmission against unauthorized access. It is also capable of network management through SNMP, which allows for monitoring and management of network devices remotely. Constructed with durability in mind, the router is housed in a rugged enclosure that protects it from dust, vibration, and temperature extremes, making it suitable for challenging industrial environments. It also supports a wide range of power inputs, which enhances its adaptability to different operational setups. Connectivity options include three Ethernet ports, which enable the connection of multiple devices simultaneously. The router also provides digital input/output for device monitoring and control, enhancing its utility in complex automation and monitoring tasks.

Techninė specifikacija

Matmenys ir svoris

Matmenys (I x P x A)	18,00cm x 35,00cm x 6,00cm
Svoris	0,70kg
