Tap into extreme overclocking potential

DDR5 ushers in a whole new era of memory technology to make extreme overclocking a more stable option than previous generations. On-die ECC delivers more reliable DRAM components, an on-board PMIC balances power when and where it's needed, and two independent 32-bit subchannels provide dramatic increases in data efficiency for multi-core processors.

Intel® XMP 3.0 certified

Intel Extreme Memory Profile technology makes overclocking a breeze with advanced pre-optimised factory timings, speeds and voltages for overclocking performance. Kingston FURY Renegade DDR5 features a programmable PMIC for XMP 3.0, supporting up to two customisable profiles to optimise your own unique timings, speeds and voltages saved directly to the DIMM.

Qualified by the world's leading motherboard manufacturers**

Tested and trusted for your preferred motherboard so you can build with confidence.

Aggressive aluminium heat spreader design

Newly designed black & silver and white & silver aluminium heat spreaders with black PCB keep your rig running – and looking – cool to complement the look of your latest PC build.
