Compact design:The adapter can be easily integrated into existing cabling and requires minimal space.

Mechanical adaptation without signal conversion:Direct plug adaptation enables simple connections without additional electronics.

The InLine® Micro-USB Adapter allows you to use an existing mini-USB cable on devices with a Micro-B connection. This means that older cables can still be used efficiently. The adapter has a 5-pin mini-USB socket and features the classic trapezoidal design used in many older devices. The Micro-B plug is designed with bevelled corners and ensures a precise fit with the corresponding port.

Its compact design makes the adapter particularly suitable for environments where different USB standards are used in parallel. The mechanical design allows direct plug adaptation without electronic components. The adapter is suitable for both data transfer and connecting power cables, provided that the end device is designed for this purpose. This makes it a practical solution for continuing to use existing mini USB cables flexibly and connecting different generations of devices.
