Aprašymas

Enough ports for your devices

The hub expands one USB Type-C® port to 4 USB Type-C® 3.2 Gen 2 ports, which offer the user a data transfer rate of up to 10 Gbit/s. In addition, one device can be charged with up to 20 watts via the lowest port of the hub.

Maximum overview, minimal effort

The display always shows you which ports are currently in use and how much current is being transferred via the 20 watt Power Delivery port during charging. Devices such as smartphones, tablets, and storages can easily be connected and exchanged via Plug & Play.

Direct power supply

The enclosed power supply unit with 24 watts is responsible for a reliable power supply. This means that all 4 ports, including the charging function, can be used simultaneously. (Attention: To use the full function of the hub, you need a power connection).

- Four USB Type-C ports via one connection: A powerful USB Type-C connector allows you to expand your device with a total of four USB-C ports and benefit from particularly fast data transfer rates on the go
- Blazing fast data transmission: With a total of up to 10 Gbit/s transfer rate, you can easily access all your devices and edit pictures, videos and other files at top speed.
- Charging port with up to 20 watts: The lowest of the four USB Type-C® connections also enables charging of a terminal device in addition to data transfer. Charging and data processing are possible at the same time (Please note: power supply unit required).
- Plug & Play: All ports are Plug & Play-capable and thus allow smooth operation despite frequently changing devices. Simply plug in and unplug the desired storage media, smartphones, or other gadgets.
- Built-in display: The integrated display provides a clear overview of which ports are currently in use and how much power is currently being used at the charging port.
