Pagrindinės savybės

- ✓ Supported storage drive interfaces: SAS, Serial ATA
- ✓ Host interface: PCI
- ✓ RAID levels: 0, 1, 5, 6, 10, 50, 60
- ✓ 12 Gbit/s
- ✓ SSD support

Aprašymas

The RAID concept (Redundant Array of Independent Disks) refers to several independent hard disks which form a large logical drive when switched together. Redundancy information is calculated from several data blocks (except for RAID 0) and saved distributed to the individual hard disks. Your operating system no longer accesses the individual hard disks, but the array.
The actual objective of the RAID concept is to increase availability and prevent downtimes in the event of a hard disk failure. However, the theoretical security of the RAID concept is only as good as the RAID controller used. Benefit from the Fujitsu RAID controllers where technology, experience and practical implementation all ensure the security that your company needs in the event of an emergency.

Techninė specifikacija

Ports & interfaces	
Supported storage drive interfaces	SAS, Serial ATA
Host interface	PCI
PCI Express slots version	3
Performance	
RAID levels	0, 1, 5, 6, 10, 50, 60

Pateikta prekės informacija yra orientacinio pobūdžio. Techninės savybės, nuotraukos, aprašymai ir kaina gali keistis be išankstinio perspėjimo. Gamintojas ir pardavėjas neatsako už galimus duomenų neatitikimus ar tipografines klaidas. Prieš įsigyjant rekomenduojame pasitikrinti aktualią informaciją.

Data transfer rate	12 Gbit/s
SSD support	Yes
S.M.A.R.T. support	Yes
Logistics data	
Harmonized System (HS) code	84733080
