Aprašymas

The **Hikvision DS-K2M061 Secure Door Control Module** is an advanced solution designed for efficient access control management. This module communicates with the access control terminal via **RS-485**, allowing it to execute essential commands such as opening and closing doors, as well as supporting both normally open and normally closed configurations. Its robust design ensures seamless integration with existing security systems, making it a reliable choice for enhancing security measures.

Equipped with the capability to collect and transmit critical signals, the DS-K2M061 captures the door magnetic signal, exit button signal, and tamper-proof signal, sending them directly to the access control terminal. This module also features a tampering alarm for added security, along with **RS-485 communication indicators** that provide real-time feedback on communication status. The inclusion of a 4-channel DIP switch allows for easy ID configuration, ensuring that the module can be tailored to specific system requirements.

Furthermore, the Hikvision DS-K2M061 supports a **Wiegand interface**, enabling the connection of a Wiegand card reader for convenient access control via card swiping. The module also integrates fire interface and exit button linkage, enhancing its functionality in emergency situations. With its comprehensive features and reliable performance, the DS-K2M061 stands out as a superior choice for secure door control applications.

Techninė specifikacija

Matmenys ir svoris

Matmenys (I × P × A) 5,00cm × 12,00cm × 3,00cm

Svoris 1,20kg
