Aprašymas

ManualCallPoint is a fast and straightforward way for anyone to activate the fire alarm. Pressing the button triggers the built-in sirens of all fire detectors in the system and informs the users. Meanwhile, the central monitoring station (CMS) receives the alarm and calls emergency services. All the data is instantly available in Ajax apps: which device was triggered, when, and where. In a life-endangering situation, Ajax innovative features follow an alarm in seconds: automation scenarios de-energize the facility, turn the emergency lights, and unlock the exits.
