Aprašymas

Cool exterior & no silicone interior

Double wall ensures better insulation to keep water hot longer. It also keeps silicone out of the interior as well as reduces the exterior temperature when the water is hot or boiling.

No spilling water

You can make a delicious cup of tea or coffee using just one hand. The lid will open with just a gentle push on the button and special anti drip lid design will make sure no drop of hot water will drip from the container.

Boiling water once for more to drink

With 1.5 l kettle capacity, you will be able to boil water once and all family members will be able to have a warm drink at the same time. Very convenient also when having a bunch of friends visiting.

Most versatile & valuable material

One of the main reasons stainless steel is most sought after is its strength, which it retains at both very high and very low temperatures. It is also one of the most hygienic materials and does not support the growth of bacteria and other pathogens. Better yet, stainless steel is a breeze to clean and maintain.

Boil-dry and overheat protection

Kettle will automatically switch off if it is accidentally switched on and there is not enough water in it, or when the temperature reaches 100 °C. Slow down, relax and enjoy.
