Aprašymas

ANLAN Platinum Series Hair Dryer

The ANLAN Platinum Series Hair Dryer combines fast drying with features designed to care for your hair and scalp. The 200-million-plasma-ion technology works in conjunction with 8 red LEDs, and the intelligent temperature detection system helps prevent overheating. It also features a styling mode with automatic switching between warm and cool air, as well as a special child mode that maintains a temperature of approximately 39°C ±3°C. The entire unit is housed in a slim 63-mm-wide design, and the operating noise level is up to 58 dB.

Fast drying when every minute counts

The ANLAN Platinum Series speeds up hair drying, so it takes less time to prepare your hair for styling. Short hair can be dried in about 1–2 minutes, medium-length hair in 2–4 minutes, and long hair in 4–8 minutes—the exact time depends on hair type as well as ambient temperature and humidity. After towel-drying, it's best to direct the airflow sequentially from the roots, through the middle sections, all the way to the ends, and finish drying when the hair is about 80–90% dry. This makes it easier to work on subsequent sections and prepare the hair for further styling.

Plasma and Red Light for a Smooth Finish

The combination of 200 million plasma ions and 8 red LEDs ensures that the ANLAN Platinum Series simultaneously cares for your hair and scalp while drying. Plasma technology reduces static electricity by up to about 98%, helps smooth the strands, and reduces dry frizz, leaving hair soft, smooth, and easier to comb. The ions penetrate deep into the hair and form a protective protein layer on the strands, with effects that can last for over 72 hours. This solution thus combines fast drying with care designed to leave hair smoother and more manageable.

Smart Temperature for Greater Control

The Smart Care system continuously monitors the temperature around the hair and scalp, helping to protect them from excessive heat. If the temperature gets too high, the dryer automatically switches to ECO mode, reducing the risk of overheating during drying. This means you don't have to manually control the temperature all the time, and you can dry your hair under gentler conditions. The temperature detection feature works

without the nozzle attached—once the nozzle is in place, the laser sensor no longer detects a signal.

Heat and Cool Styling

Styling mode automatically alternates between warm and cool air to minimize hair damage and help lock in moisture. Instead of exposing strands to a single airflow type the entire time, the dryer adjusts the temperature as it operates. This feature works well for finishing your hairstyle after initial drying, when you're not just trying to remove moisture but also want to achieve a smoother look. The set also includes a magnetic nozzle that can be used to direct the airflow during drying and styling.

Kids Mode with a temperature of approximately 39°C

The special Kids Mode allows you to set the device for gentler drying of children's hair. Once activated, the air temperature is locked at approximately 39°C $\pm$ 3°C, and the mode uses low airflow and operates at a low noise level. The function is activated by holding down the corresponding button for 3 seconds. The low temperature reduces the intensity of heat on a child's sensitive skin, while the gentler airflow and quieter operation ensure a more comfortable drying experience.

Comfortable drying without excessive noise

The dryer's nozzle is 63 mm wide, allowing for a slim design. The magnetic nozzle is easy to attach and lets you focus the airflow on a specific section of hair, ensuring precision during drying and styling. Settings can be adjusted using the controls on the handle and the circular panel on the front of the dryer. The low-noise design allows you to use the ANLAN Platinum Series both in the morning and late at night without generating excessive noise. The noise level is up to 58 dB, though it varies depending on the airflow speed.

Included in the set

- Hair dryer
- Nozzles x2
- User manual

Manufacturer	ANLAN
Manufacturer code	05-ACFJ43-0VE
Series	Platinum Series
Ionic technology	200 million plasma ions
Red LED light	8 LEDs
Overheating protection	Automatic switch to ECO mode
Child mode	Yes
Temperature in child mode	Approximately 39°C $\pm$ 3°C
Noise Level	$\leq$ 58 dB
Nozzle Width	63 mm
Approximate Drying Time for Short Hair	1–2 min
Approximate Drying Time for Medium-Length Hair	2–4 min
Approximate Drying Time for Long Hair	4–8 min
Recommended dryness level before further styling	80–90%
Nozzle	Magnetic
