Aprašymas

AMZCHEF CE-ZM1919 Slow Juicer (black)

The AMZCHEF CE-ZM1919 slow juicer lets you prepare not only fresh juices, but also plant-based beverages (such as oat or nut milk) and smooth sorbets. With a maximum power of 600 W and a pre-chopping system, it ensures efficient operation, and the wide feed chute allows you to place even whole fruits or vegetables into the chamber. The device uses cold-press technology and achieves up to 99% juice extraction, reducing waste and helping to preserve more nutrients. The large 2,500-ml chamber lets you prepare a larger batch of juice in a single go, and the automatic chopping feature reduces the amount of manual labor required. You also have access to digital recipes that can inspire you to make healthy, delicious juices.

Simply add the ingredients and let the juicer do the work

The large 2,500-ml chamber allows you to fit a larger portion of fruits and vegetables into the machine, and the wide feed chute—with a diameter of about 160 mm—accommodates many whole items. This means less prep work before you start and no need to keep adding small portions. Once the ingredients are placed in the chamber, the Pre-Cutter system kicks in, automatically chopping them up before they are fed into the juicing mechanism. This solution not only reduces the number of manual steps but also helps prevent the juicer from clogging.

Multi-stage juicing system

After initial chopping, the ingredients are fed into a multi-stage auger mechanism, which performs the thorough juicing. The device achieves up to 99% juice extraction, allowing you to get more juice with less waste while preserving nutrients. Cold-pressing helps achieve a smooth consistency in the beverage, and a pure copper motor with a maximum power of 600 W ensures the efficient operation of the entire mechanism. Its design also minimizes heat buildup and reduces noise levels during operation.

3-in-1 Juicer - Juices, Plant-Based Beverages, and Sorbets

The CE-ZM1919 model offers much more than just juicing fruits and vegetables. Its 3-in-1 design allows you to prepare juices, oat and nut-based drinks, as well as creamy sorbets made from fresh fruit. Two types of filters are available—one for juices and plant-based drinks, and a separate filter for sorbets. The first uses filtration zones with varying levels of fineness—from coarse to fine to very fine—which helps achieve a cleaner and smoother texture.

Less foam, less dripping, easier pouring

The juice container is equipped with a foam separator, which helps achieve a smoother, more uniform consistency when pouring. Meanwhile, the Anti-Drip system minimizes dripping from the spout after operation, making it easier to keep your countertop clean. Thanks to these features, you can conveniently pour the finished juice into a glass without making a mess.

Full Control and Reverse Function

The juicer is operated using a convenient dial located on the front of the unit. In addition to the ON and OFF settings, there is a Reverse function that changes the direction of the mechanism. You can use this feature if the ingredients get stuck inside the appliance. The CE-ZM1919 model also features a safety mechanism that ensures the lid is properly positioned, promoting safe operation.

Disassemble, Wash, and Prepare for the Next Use

After preparing juice or sorbet, the working parts can be disassembled for thorough cleaning. The lid can be removed once it is fully opened, and the individual parts of the mechanism can be detached one by one and washed under running water. The Direct-Insertion design also simplifies the removal of the entire upper module and its reinsertion into the base, helping to prevent improper alignment. As a result, regular cleaning of the juicer is no problem at all.

Great capabilities without taking up much countertop space

The housing is 225 mm wide, 195 mm deep, and 403 mm tall, so the appliance primarily uses vertical space and doesn't take up much room on the kitchen countertop. Additionally, non-slip pads on the base prevent the appliance from sliding and ensure its stability. The design is complemented by a light located at the bottom of the unit.

Manufacturer	AMZCHEF
Model	CE-ZM1919
Color	Black
Type	Slow juicer
Voltage	220-240 V~, 50/60 Hz
Rated power	300 W
Maximum power	600 W
Maximum continuous operating time	≤10 min
Minimum rest time	≥10 min
Chamber Capacity	2500 ml
Technology	Cold-press
Pre-chopping System	Yes
Functions	Juicing, preparing oat and nut beverages, preparing sorbets
Filter types	Filter for juices and plant-based beverages, filter for sorbets

Reverse function	Yes
Anti-Drip system	Yes
Non-slip base	Yes
Dimensions	22.5 × 19.5 × 40.3 cm

PPWR: <https://ppwr.innpro.pl/en/amzchef>, Gross weight: 5320, Net weight: 4200, Box length: 43,50, Box width: 33,00, Box height: 18,00
