Aprašymas

EMEET PIXY Wireless Webcam

The EMEET PIXY Wireless is a wireless PTZ camera designed for streaming, video recording, training sessions, podcasts, and live broadcasts. It records video at up to 4K resolution at 30 fps and Full HD 1080p at 60 fps, supports HDR, and offers a wide 97° field of view. The AI Auto Tracking feature automatically tracks a person in front of the lens, and gesture control allows you to quickly start or stop tracking. The camera also features a built-in 48 kHz microphone, a battery providing up to 8 hours of runtime, an SD card slot, a USB-C port, and a standard 1/4-inch tripod mount.

4K Video and Smooth Full HD Recording

Depending on the type of content, you can choose between 4K at 30 FPS or 1080p at 60 FPS. The former provides high image detail, while the higher frame rate in Full HD is ideal for recording more dynamic scenes. HDR support helps preserve more detail in both bright and dark areas of the image, making it easier to record in rooms with varied lighting.

AI Auto Tracking and Gesture Control

AI-powered automatic tracking allows the camera to follow a moving person and keep them in the frame. This is a practical solution for presentations, training sessions, tutorials, or live streams where the presenter does not remain in one place the entire time. You can also start or stop the tracking function with a hand gesture, without having to go to your computer or phone.

Wide Field of View and 48 kHz Microphone

The 97° field of view allows the camera to capture a larger portion of the room, enabling it to record both the presenter and their immediate surroundings. The EMEET PIXY Wireless is also equipped with a built-in 48 kHz microphone, which allows you to record audio without connecting an additional microphone for simpler applications such as conversations, training sessions, or live streams.

Up to 8 hours of wireless operation

The built-in rechargeable battery provides up to 8 hours of use, reducing the need to constantly plug the camera into a power source during longer sessions. The wireless design offers greater freedom in positioning the device within the room. The camera also features a USB-C port, an SD card slot, and a 1/4-inch tripod mount, allowing you to mount it on a compatible tripod or other mount that uses this standard.

EMEET Studio and Multi-Camera Support

The EMEET Studio app allows you to control the camera, monitor the video feed, and switch between shots from a single interface. The software is available for devices running Android, iOS, Windows, and macOS. The system also supports up to three cameras simultaneously, making it easy to set up a multi-camera rig for podcasts, presentations, live streams, and recordings from multiple angles.

A Camera Ready for Streaming

The EMEET PIXY Wireless can be used with popular streaming platforms and tools such as YouTube, Twitch, TikTok, Instagram, Facebook Live, Discord, OBS Studio, Restream, and Kick. The ability to wirelessly position the camera, automatic tracking, and support for multiple devices make this model a great fit for streaming setups and independent video production. The included portable case makes it easy to store and transport the device along with its accessories.

Manufacturer	EMEET
Model	PIXY Wireless
Type	wireless PTZ camera
Maximum resolution	4K 30 FPS
