Aprašymas

Equip 121147 RJ45 Shielded Plug is a type of connector used in networking and telecommunications for Ethernet cables.

It offers higher data transfer rates and better performance compared to Cat 6. Cat 6A supports data rates of up to 10 Gbps (Gigabits per second) over a distance of up to 100 meters, making it suitable for high-speed networking applications.

RJ45 plug has additional shielding or insulation to protect the signal from electromagnetic interference (EMI) and radio frequency interference (RFI). This shielding helps maintain signal integrity and reduce the risk of data transmission errors in environments with a lot of electrical interference.

A Cat6A RJ45 Shielded Plug is a network connector designed for high-speed Ethernet connections, offering enhanced performance and protection against electromagnetic interference, making it suitable for demanding networking environments where data integrity and reliability are essential.
