Six popular protocols encrypt the data tunnel in the way you prefer, either when connecting as a client or hosting a VPN server.

Compatible with 50+ Providers

Built-in WireGuard and OpenVPN VPNs allow you to share your commercial VPN with all connected devices.

Assign VPN to Specific Devices

Out of the security or performance concerns, you can choose specific devices to use the VPN in the device management panel.

No Public IP? No Problem

Hosting a VPN server usually requires a public IP. ZeroTier enables you to host a server even if you do not have a public IP in hotels or cafes.

DNS over TLS Protects Browsing Data from Leaking

Without DNS over TLS

Hosting a VPN server usually requires a public IP. ZeroTier enables you to host a server even if you do not have a public IP in hotels or cafes.

With DNS over TLS

Your website lookup requests will be encrypted and handled by trusted DNS providers including Cloudflare, Google, and Quad9. The Quad9 has made no-logging claims, so literally, no one can know which websites you have visited.

A Protection Layer Between Your Data and Public Wi-Fi

Choose the router or WISP mode to improve security when you connect to public Ethernet or Wi-Fi correspondingly. It also carries AP/RE/Client modes, plus support for Cudy Mesh, for various scenarios.

Pocket-Sized Mighty Functions

Lighter, Smaller than Phones

Weighing only 99.9 g (3.52 oz.) with a pocket-size, TR1200 is a travel-friendly network companion.

Power with your Laptop

Power it with your laptop or phone charger through the USB-C Power Jack. The third-party power supply needs to be 5V / 2A or equipping PD.

Click! Your VPN is On.
A configurable switch allows you to quickly toggle the VPN, without needing to enter the config page.

Host Your Own NAS

Plug in your drive to host your own cloud station with Samba protocol. Third-party software "X-plore" is required for Android systems.
